Route Transfer Software

About RTSplus™

RTSplus™ is **Route Transfer** software designed to provide you with a low-cost, easy to use meter reading entry solution. RTSplus™ works in conjunction with the **MREplus™** software on the Motorola Symbol 3000 Handheld Mobile Computer Device.

Works with Your Current Billing Software

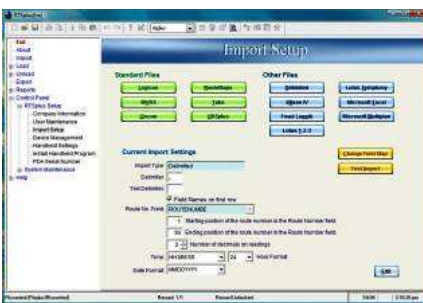

The RTSplus™ software works with your current utility billing software by allowing you to “map” the reading file exported from your billing system into the format the **MREplus™** software in your handheld uses. Once you have mapped the reading file from your billing system, RTSplus™ remembers the map allowing you to load and unload your readings without re-mapping each reading cycle.

Powerful Reporting Feature

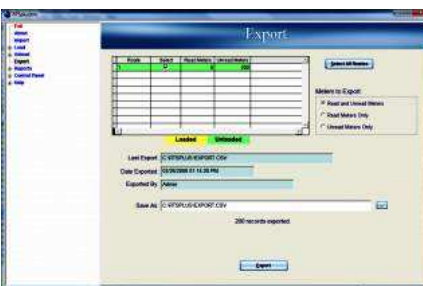

RTSplus™ includes a very useful, feature-rich report menu which includes:

- **Meter Reading Detail** — Provides a “Proof List” of the meter reading file imported from the billing software.
- **Exception Report** — Special report providing supervisors a list of all services the meter reader viewed the “More Screen” on. This allows supervisors to curb “shade tree reading”
- **Read, and Unread Meters Report** — Lists all meters with readings on the Read Meters Report. Lists all meters without readings on the Unread Meters Report.
- **Comment Code and Extended Comment Report** — Lists all Comment Codes and Extended Comments entered by the meter reader or passed from the billing system to the Motorola Symbol 3000 handheld.
- **Found Meters Report** — Lists all meters the meter reader entered as “Found Meters” in the Motorola Symbol 3000 handheld. The report includes Customer and Location information.
